

Matheus Elis da Silva

Software Engineer with over 4 years of experience in back-end development, building scalable microservices, ETL pipelines and cloud architecture (GCP and AWS). Strong background in high-volume financial systems, credit data integration and financial reconciliation. Bachelor's degree in Computational Physics from Universidade Federal Fluminense.

Academic Education

2015-2021 **Bachelor's degree in Physics, with an emphasis on Computational Physics;**
Universidade Federal Fluminense

Scholarship Monitor at the Sensebiliza Project (2017-2021)

Monograph entitled: Study of the Dynamics of Leprosy in the North of Brazil Via Agent-Based Modeling

Professional Experience

Back-End Software Developer: GFT Technologies - Apr 2025 - Present

Consulting company, working directly with the client **Jeitto**, a lending company, as part of the Finance team.

- Development and refactoring of the integration layers with investment funds, covering both credit assignment and financial reconciliation flows.
- Restructuring of the fund documentary evidence delivery flow, reducing the number of rejections and increasing the efficiency of the credit assignment process.
- Development and maintenance of Back-End applications in Python using the FastAPI and Flask frameworks.
- Creation and maintenance of ETL pipelines for financial data integration and reconciliation.
- Pipeline orchestration on Google Cloud Platform using Kubernetes (GKE) and Airflow Composer.
- Maintenance and management of SQL (PostgreSQL and MySQL) and NoSQL (MongoDB, Google Datastore and Redis) databases.
- Application monitoring using Grafana, New Relic, Datadog, Google Cloud Logging and Google Cloud Monitoring.
- Working under the Scrum agile methodology.
- Active participation in technical architecture and system design discussions for the company's architectural decisions.

FullStack Software Developer: 2RP Net - Oct 2022 - Apr 2025

Consulting company, working directly with the client **Pefisa**, integrating the company's data department.

- Development of scalable microservices for receiving and allocating partner credit data into transactional and historical databases, supporting high data volume.
- Development of the applications responsible for delivering the Risk Management and Compliance (GRC) engine to in-store representatives.
- Development and maintenance of Back-End applications using Python, Golang and NodeJS.
- Creation and maintenance of ETL pipelines for the data integration sector.
- Creation of microservices in cloud environments (Google Cloud Run, Google Cloud Functions and Google Kubernetes Engine).
- Data pipeline orchestration with Airflow Composer.
- Maintenance and management of SQL (PostgreSQL, MySQL and OracleDB) and NoSQL (MongoDB, Google Datastore and Redis) databases.
- Application monitoring using Grafana, Google Cloud Logging and Google Cloud Monitoring.
- Working under the Scrum agile methodology.

Back-End Software Developer: ZAX - Mar 2022 - Sept 2022

Wholesale fashion marketplace, working in the Credit and Risk sector.

- Creation and maintenance of Kubernetes microservices using Golang, Python and PHP.
- Migration of the legacy ERP system to a new version with modern technologies, improving internal team usability and optimizing the credit analysis and fraud detection departments.
- CI/CD automation using GitHub Actions and Serverless Framework.
- Use of AWS cloud tools such as Lambda, ECS, CloudWatch and SQS.
- Working under the Kanban agile methodology.

Back-End Software Developer: TrackCash - June 2021 - Apr 2022

Financial reconciliation company, serving sellers who sell their products on marketplaces such as Amazon and Magazine Luiza.

- Development of Python applications to automate the collection of clients' data from the marketplace management platforms, replacing previously manual processes and increasing operational efficiency.
- Work on the company's internal ERP, written in PHP, responsible for the financial reconciliation of clients across the marketplaces where they sell.
- Development of internal CLI applications to manage ETL routines.
- Development and maintenance of applications to monitor automation routines.
- Use of AWS cloud with tools such as Kubernetes and Lambda.
- Working under the Scrum agile methodology.

Technical Skills

Programming Languages

- Python, Golang, JavaScript, TypeScript, PHP

Frameworks and Tools

- FastAPI, Flask, Django, Express, Gin, React, Bootstrap, Laravel, Magento

Data and ETL

- Spark, Apache Airflow (Airflow Composer), Data pipelines

Cloud and Infrastructure

- Google Cloud Platform (Cloud Run, GKE, Cloud Functions, Datastore), AWS (Lambda, ECS, SQS, CloudWatch), Docker, Docker Compose, Kubernetes, Terraform

Databases

- PostgreSQL, MySQL, OracleDB, MongoDB, Redis, Google Datastore

Observability

- Grafana, New Relic, Datadog, Google Cloud Logging, Google Cloud Monitoring

Tools

- Git, GitHub Actions, Serverless Framework
